Eric, It looks like CID/DOJ has worked out an arrangement with the CG and the MB distributors whereby the MB cylinders will be packaged by Great lakes and Cardinal, and brought to the dock by CID, and put on a CG vessel. Both cylinders will be shipped out of St. Thomas to the mainland (Florida) by a CG vessel. From there it will be transported overland to Colorado for sampling. They will then be turned over to Greatlakes/Cardinal for transport back to their production facilities.
